tsm register

You can use the `tsm register` command to register [Tableau Server]. This command lets you either display the registration file template (using the `--template` option) or provide the path to a completed registration file (using the `--file` option). You must use one of these two options when calling the `tsm register` command.

Synopsis

```
tsm register --template | --file <registration-filename> [global options]
```

Options

--file <registration-filename>

Required.

Path to the file that contains the registration data.

--template

Required.

Display registration filetemplate.

[](){.icon--med-lg .icon--arrow-up .heading-item__icon}{.heading-item__link .print-hidden} Global options

-h, --help

Optional.

Show the command help.

-p, --password <password>

Required, along with `-u` or `--username` if no session is active.

Specify the password for the user specified in `-u` or `--username` .

If the password includes spaces or special characters, enclose it in quotes:

```
--password "my password"
```

-s, --server https://<hostname>:8850

Optional.

Use the specified address for Tableau Services Manager. The URL must start with `https` , include port 8850, and use the server name not the IP address. For example `https://<tsm_hostname>:8850` . If no server is specified, `https://<localhost | dnsname>:8850` is assumed.

--trust-admin-controller-cert

Optional.

Use this flag to trust the self-signed certificate on the TSM controller. For more information about certificate trust and CLI connections, see Connecting TSM clients.

-u, --username

Required if no session is active, along with `-p` or `--password` .

Specify a user account. If you do not include this option, the command is run using credentials you signed in with.
